Bose soundtouch 300 soundbar owners manual

2 x Bose SoundTouch 300 Soundbar Enhance your TV audio with Bose SoundTouch 300 Soundbar. Dolby Digital and DTS signal decoding capabilities are designed to provide enhanced audio quality compared to tv speakers. Its ADAPTiQ setup will adjust the audio input for your specific listening area. The Soundbar has Bluetooth with NFC to pair with your smart device and wirelessly stream your audio content; similarly, it has built-in Wi-Fi so you can stream music from your smart device, computer, or NAS. The SoundTouch 300 has AN HDMI input and ARC-compatible HDMI output to allow a cable to be connected to your TV. Its HDMI port also supports 4K pass-through so you can wire it between your Blu-ray player and the TV without losing any resolution. It also has an optical input on board for older equipment. The soundbar includes HDMI cable, fiber optic cable and universal remote control. Less effortless, more music with soundbar SoundTouch 300, you can listen any way you want, without worrying about which technology is the best. It lets you stream music from your phone or tablet using Bluetooth, or connect it to a Wi-Fi network to listen at home without your phone. SoundTouch App Once you have a SoundTouch speaker, you can add more at any time. They all work together, so when you go from room to room, your music comes with you. The free SoundTouch app gives you greater control over any SoundTouch product, even your SoundTouch 300 soundbar, from your smartphone or tablet. Use it to browse and control music in your home. Start streaming right away or use the app to personalize presets for your favorite music and stations. Expand your SoundTouch System If you're looking for lower-level audio, add the Acoustimass 300 wireless bass module; if you want a real surround sound system, add virtually invisible 300 wireless surround speakers. Bluetooth extras with NFC pairing and Wi-Fi technology allow you to play music any way you like. ADAPTiQ calibration sound room tweaks the sound of the system to your room. HDMI connection with 4K pass-through ensures high quality digital connection. Includes a universal remote control, so you can control your other devices. A simple connection to the TV makes setup easy. The WB-300 wall rack (sold separately) allows you to install a soundbar underneath the TV. Over time, updates will be available for your SoundTouch system. When available, the SoundTouch app prompts you to update when you open it. You can also manually check if the update is available in the SoundTouch app by completing the following steps: In the SoundTouch app, select Menu (≡) > Settings > Speaker Settings. On desktops and tablets, if the Menu (≡) icon is not visible, the slide menu may have opened Select UPDATE. If the UPDATE button appears grayed out, no updates are currently available for your system Note: Updates are released in batches, so not all users receive the update at the same time. It may take up to 2 weeks from the release date before the latest update is available to your system. If you're having problems with the update, you can update it manually by following the steps below. Note: If you have an Acoustimass 300 wireless bass module connected to your system, it must be connected wirelessly to receive updates as well. If the bass module is connected to the panel by a 3.5 mm cable during the system update, the bass module will not be updated. To update the bass module, disconnect the 3.5 mm cable at both ends, pair the bass module with the panel, and reinstall the software using the method below. You can update the system yourself using the remote control. This method requires your system to be connected to your network. The Wi-Fi ® on the front of the system must be dense white to indicates a network connection. Note: Without a new update, this method will reload the current version on your system: On the remote control, press the SoundTouch Press button and hold down the Closed Caption (CC) button until the Wi-Fi indicator, TV indicator, SoundTouch indicator and Bluetooth Indicator® on the white flashing sound Release the CC button. The Wi-Fi alarm will blink while the system is updating. The update may take 10 minutes or more, and the system will restart when the update is complete. You can view the update progress in the SoundTouch app. In-app progress bar will reach and remain at 100% after the audio is updated, but remains at 100% because the bass module is updated (if connected). You'll need a USB A to Micro USB cable to do the following. At the prompt, click SAVE to save the Update.stu file to your desktop (don't rename the file). If you don't see the reminder, the file might have been downloaded automatically. Find the Update.stu file at the footer or title of the browser window or in the Download USB cable connection folder from your computer with the SoundTouch system SERVICE jack on the back of the soundbar In the update screen, select FILE (If the button doesn't work, click the empty field to the right SELECT FILE) In the file selection window , find and select the Update.stu file you downloaded in step 2. After selecting, the file name appears in the field to the right of the FILE SELECT button Click UPLOAD and wait while the installation update: The progress bar in the browser window will display the update status After installation, your system will restart
